Dear David:

We have been using your Fossil Shell Flower product for about a month now on all our horses. The fecal samples of a couple of our horses who have always had problems with worms showed an amazing absence of worm larvae after being put on the product. I also noted that there are almost no flies within the barn even though normal numbers of flies appear around the barn.

In conclusion, Fossil Shell Flour appears to have the ability to curb the infestation of worms in horses while controlling the fly population in and around the barn.

Yours sincerely,

Georgé Wiecker
