

BreastProtect Option™

Provides the essential nutrients for all women of all ages to achieve better Breast Health.

BreastProtect Option is a 3 in 1 supplement that uses an advanced enhanced delivery system* for Diindolylmethane, Calcium D-Glucarate, and Red Wine Extract. The combination of these 3 ingredients formulated together has been successful in a breast health program with more than 2,000 women for hormonal balancing and detoxification.

**Patent Pending*

CONCERNS

Invasive breast cancer is the most common non skin cancer in American women and is also one of the leading causes of death for women under the age of 65. Research has indicated a significant link to cancer promoting estrogens and other problematic environmental factors. Estrogens made by the breast cells can be a major risk for the development of breast cancer, and other potentially harmful estrogens such as 4-OH and 16-OH estrogens may cause cancer growth, fibroid growth or even endometriosis.

RESEARCH

Research has shown that certain non toxic nutritional supplements are capable of inhibiting the initiation and promotion stages of breast carcinogenesis. Based on these studies and combined with clinical experience, the development of the patent applied for formulation of BreastProtect Option was derived.

THE ENHANCED DELIVERY SYSTEM

BreastProtect Option is delivered via a patent pending enhanced delivery system with a powerful absorption ability that supplies the three essential nutrients, Diindolylmethane, Red Wine Extract and Calcium D-Glucarate very efficiently. Laboratory tests with BreastProtect Option show over 4 times greater blood levels of Diindolylmethane found than in any other competing products.

THE 3 MAIN INGREDIENTS

1. DIINDOLYLMETHANE

Diindolylmethane (DIM), a chemopreventative nutrient derived from the digestion of cruciferous vegetables, is a powerful modulator of estrogen metabolism in the breast cell. The natural compound DIM has shown through clinical studies to help the breast manufacture good estrogens that actually protect against breast cancer formation. It increases the production of good estrogens and metabolites known as "2-Methoxyestrogen", estrogens that prevent a cell from becoming cancerous as well as providing powerful antioxidant capabilities.

2. RED WINE EXTRACT

Red Wine Extract is a blend of red wine grape skins and seeds. This combination is a rich source for friendly polyphenolic compounds that include Resveratrol, Quercetin and Rutin. Resveratrol helps control cell division and also provides other benefits such as:

- Decreases platelet clumping
- Has anti inflammatory activity
- Inhibits the enzyme Aromatase

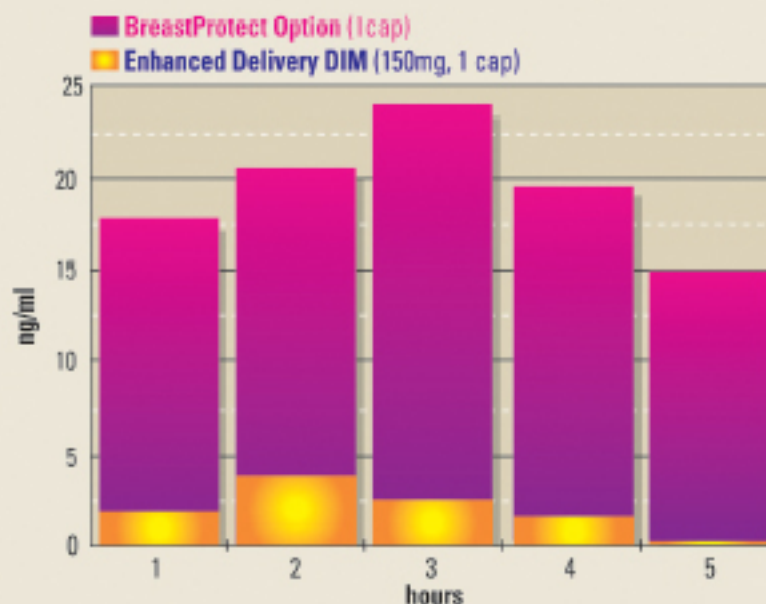

Potent antioxidants are found in this ingredient as well as powerful estrogen modulators which can also act to protect the breast.

3. CALCIUM D-GLUCARATE

Glucarate is a natural occurring substance which supports the major detoxification pathways in the body. It metabolizes the enzyme Beta-Glucuronidase which is found in breast tumor sites. Animal studies have shown that Calcium D-Glucarate blocks the unwanted enzymatic reaction happening by up to 50% and then decreases unwanted estrogen levels by almost 23%. Calcium D-Glucarate is a breast cancer chemo preventative and has been shown to reduce tumor mammary volume by up to 73%. This product is the only orally administered sustained release product patented by a subsidiary of M.D. ANDERSON CANCER CENTER.

These three established natural ingredients Diindolylmethane, Red Wine Extract and Calcium D-Glucarate are combined and designed specifically for breast health as well as provide an anti-aging benefit for the heart, brain and bones.

SERUM LEVELS OF DIINDOLYLMETHANE

LIST OF INGREDIENTS (per serving size/1 capsule)

Calcium (as Glucarate)	24 mg
Diindolylmethane	100 mg
Red Wine Extract	200 mg
Calcium D-Glucarate	200 mg
Medium Chain Triglycerides	45 mg
Lecithin (Phosphatidyl Choline 26%)	45 mg

OTHER INGREDIENTS

Magnesium Silicate, Cellulose Powder, Magnesium Stearate

DOSAGE

One capsule two (2) times daily with meals or as directed by a healthcare physician.

WARNING

Do not use if you are pregnant or breast feeding. May interfere with oral contraceptives. Keep out of reach of children.

BREASTPROTECT OPTION™ / BENEFITS

BreastProtect Option may also help reduce the effects of the following symptoms:

- PMS symptoms
- Fibrosystic Breast Disease
- The growth of fibroids
- Abnormal Pap Smears (HPV)
- Menorrhagia
- Assist Glucuronidation
- Inhibits the growth of HPV virus
- Inhibits the production of 4 and 16-Hydroxyestrogens
- Inhibits Tyrosine Kinase-C
- May help induce CYP1A and GST
